ABSTRACTED-PUB-NO: JP2001057897A

BASIC-ABSTRACT:

NOVELTY - Production of fructosyl-valine comprises coupling N-terminal valine residue of protein or peptide to fructose to form fructosyl-valine, which is then removed from the peptide or protein by enzymatic treatment, using serine carboxypeptidase (EC3.4.16.1).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for fructosyl valine assay, which involves contacting keto-amine oxidase with fructosyl-valine and measuring the hydrogen peroxide formed.

USE - Fructosyl-valine is useful for measuring hemoglobin A1c, which is useful as a parameter of mean glucose level in diabetes mellitus patient.

ADVANTAGE - Amount of fructosyl-valine, and hence the amount of hemoglobin A1c, can be measured with high accuracy. Production of fructosyl-valine is very simple.
